

General Data Protection Regulation (GDPR) FAQ

At New Relic, we understand the importance of data and its protection. Our privacy and security professionals collaborated with customers and internal teams to prepare for the GDPR, which went into effect May 25, 2018. We know our customers, especially those in the European Economic Area (EEA) or processing data from the EEA, care deeply about the privacy and security of the performance data transmitted to New Relic for processing. Compliance with the GDPR requires a partnership between New Relic and our customers in the use of our services. New Relic enables our customers who elect to process personal data in our products to do so in accordance with the GDPR and applicable data protection laws, and we work to ensure that our practices and contracts are prepared to support any customers who wish to include personal data in their performance data.

Is New Relic compliant with the European Union's GDPR?

With regards to the processing of customer data, New Relic act as a data processor (under GDPR); in other words, New Relic does NOT generally determine the purpose and means of processing and is therefore not in a position to make any statement about compliance. Where New Relic act as data controller (i.e. when New Relic does in fact determine the purpose of processing), such as when we process account data or audit logs, New Relic complies with all applicable laws. Moreover, New Relic will endeavor to take as consistent a position as possible regardless of the individuals' country of residence or region of origin.

Does New Relic process personal data as part of the performance data?

New Relic agents do not collect personal data by default with limited exceptions ([see footnote](#)). Our products are focused on the performance of software, systems and applications—not individuals. Customers may configure a custom API, custom attribute, or custom event to track personal data, subject to the terms and conditions of their agreement with New Relic. Our processing is data agnostic and automated, so all data is processed in the same way in accordance with each customer's configuration and instructions. Please consult [New Relic Services Help](#) for more information about data processing.

Does New Relic process special categories of data?

No, New Relic's terms of services and customer contracts specifically prohibit the use of the services to collect, process and store special categories of data as defined in the EU GDPR.

Where are New Relic's servers?

New Relic processes and stores all performance data either in our US data center near Chicago, Illinois or our European data center in Frankfurt Germany (for the EU Region service if selected by the customer), and uses backup data centers in these same regions for disaster recovery.

What contractual mechanism does New Relic use for data protection?

New Relic contracts are designed to support customers who wish to include personal data of EU data subjects in their performance data. To ensure that an adequate mechanism is in place for all transfer of personal data outside of the EEA, New Relic self-certifies with both [EU-US and Swiss-US Privacy Shield](#) and can enter into standard contractual clauses upon request.

New Relic's data protection addendum (DPA), which customers may request, includes standard contractual clauses. Please reach out to your Account Executive for more information.

What security measures has New Relic taken to protect performance data?

Our security teams continue to ensure we are in line with industry standards and best practices for all data processing. By default, data is encrypted in transit between the agent and New Relic's servers, which are housed in Tier III, SOC 2 data centers. New Relic undergoes annual SOC 2 Type II audits of its security practices and policies, the results of which are made available upon request.

New Relic documents all privacy-related controls for its services in the following [help page](#)

Can New Relic delete or return performance data?

Customers can request help with deletion of their data at any time. Upon closure of a customer account, all performance data is deleted within 90 days. Requests for return or deletion of data are handled on a case by case basis. All such requests should be sent to personaldatarequests@newrelic.com.

How will New Relic respond to data subject requests?

Yes, New Relic has well defined processes to respond to data subject requests, including consent. For more information see [Personal Data Requests](#).

Should New Relic receive a request from a customer's customer, we will promptly forward it to the appropriate customer.

Has New Relic appointed a Data Protection Officer?

Yes, New Relic appointed two Data Protection Officers. An internal Data Protection Officer, to ensure sufficient internal oversight for Data Protection Impact Assessments, product and vendor reviews and privacy by design/default processes, and an external Data Protection Officer based in Germany. To contact either, please email privacy@newrelic.com.

In addition, New Relic has a Privacy and Product legal team with presence both in the USA offices and in its European headquarters in Dublin, Ireland.

This document will be updated periodically as we receive additional questions from our customers.
