

New Relic Data Plus

Advanced observability at scale with our all-in-one data option.

Teams of all sizes rely on the New Relic Intelligent Observability Platform. Our customers have shifted or migrated to our consumption-based model, which delivers more value for the money compared to earlier, host-based approaches.

New Relic Data Plus takes this one step further, offering advanced, industry-leading data capabilities for optimized performance, scale, and governance. Capabilities include eligibility for Federal Risk and Authorization Management Program (FedRAMP), extended retention, configurable logs obfuscation rules, cloud provider choice, and more. Data Plus is available at the limited promotional price of \$0.50/GB of data ingested. This represents a 65% or more savings compared with using each capability individually.

Instead of individual contracting and billing, pricing for Data Plus is aligned to our simple, affordable per-GB pricing model—with no complex billing structures or coverage premiums.

Up to 90 days extended retention

Instead of paying individual premiums for data indexing and retention of each data source, choose which data you want to store longer in New Relic without increasing your monthly costs.

Higher maximum query limit

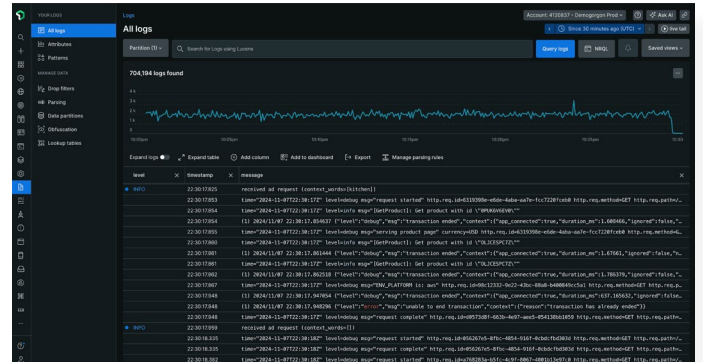

Eliminate dropped queries and achieve increased query capacity with 20 billion data points per minute for the original data option and 60 billion data points per minute for Data Plus. There's no 15-minute wait time for limits to reset, and when the limits are reached, queries won't be rejected. In addition, you get a maximum query duration of up to 10 minutes, compared to 60 seconds for the original data option.

FedRAMP and HIPAA enabled

Leverage security configurations designed to help you meet your FedRAMP and HIPAA requirements (Enterprise edition customers only). This is especially helpful if you're in a highly-regulated sector.

Advanced, configurable logs obfuscation

Track logs obfuscation rules directly in the log management UI and create anonymous identifiers for sensitive log data, such as personally identifiable information (PII), access tokens, and other private or regulated data.

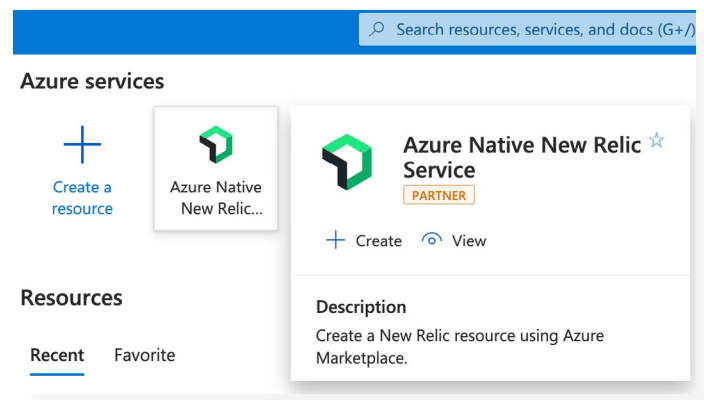

Streaming and historical data export

Export New Relic data to external destinations for historical analysis and modeling, long-term storage, and integration with other data analytics platforms.

Cloud provider choice

Choose your preferred cloud provider—Amazon Web Services (AWS) or Microsoft Azure—for your observability workloads to align your telemetry storage with your engineering deployment model and cloud preference.

New Relic Vulnerability Management

Easily aggregate existing security data from third-party tools alongside vulnerabilities detected by New Relic to understand security signals and address vulnerabilities across your entire stack.

Price comparison by data option

View a side-by-side comparison of our original data option and Data Plus.*
 Prices and limits are monthly. All dollar amounts are USD.

Capability	Original Data Option <small>(available for all editions)</small>	Data Plus Option <small>(available for all editions)</small>
Data ingest free limit <small>(includes Vulnerability Management for full platform users)</small>	100 GB	100 GB
Price per GB ingested <small>(beyond free limit)</small>	\$0.35/GB	\$0.55/GB
Data retention free limit <small>(varies by data type)</small>	Default of at least 8 days	90 days extra over the default
Additional price for 30 days data retention <small>(beyond free limit)</small>	+\$0.05/GB	+\$0.05/GB
Additional price to store data in our EU data center <small>(data is stored in our US data center by default; Azure not available in the EU)</small>	+\$0.05/GB	+\$0.05/GB
Maximum query limit	20 billion data points per minute	60 billion data points per minute
Maximum query duration	1 minute	Up to 10 minutes
Cloud provider choice	AWS and/or Azure	AWS and/or Azure
Default logs obfuscation <small>(automatically mask known credit-card and Social-Security-number patterns in logs)</small>	✓	✓
Advanced, configurable logs obfuscation <small>(create and track rules directly in the log management UI and mask or hash sensitive log data)</small>	✗	✓
Vulnerability Management <small>(full platform users only)</small>	+\$0.10/GB <small>(beyond free limit)</small>	✓
FedRAMP Moderate eligibility <small>(Enterprise edition only)</small>	✗	✓
HIPAA eligibility <small>(Enterprise edition only)</small>	✗	✓
Streaming data export	✗	✓
Historical data export	✗	✓

*You may only use one data option at any given time: New Relic original data option or New Relic Data Plus. Data Plus is available to Pro and Enterprise edition customers only. Included capabilities differ for Data Plus when choosing New Relic in Azure.
