New Relic Monitoring for SAP[®] solutions

All-in-one SAP observability for all.

The SAP-certified integration from New Relic brings together all SAP and non-SAP telemetry—events, metrics, logs and traces—into a unified data platform, for one view of infrastructure, application, and business processes.

Monitor the performance and overall health of your entire SAP ecosystem or individual components by directly ingesting existing SAP data sources without agents. Powerful visualizations allow IT to better support the business with faster root-cause identification and problem resolution.

Centralize all your data

Gain access to all your SAP system data in one shot, with easy navigation, and the ability to drill down in a snap.

Get instant visibility

Provide comprehensive end-to-end visibility into accurate data for any management level, anytime.

Set up fast

Quickly and easily leverage existing SAP data sources with a purpose-built SAP-certified data connector.

Gain efficiency

Forget about time consuming manual processes and jumping between data silos to manage SAP systems.

Boost Business Support

Gain a better understanding of business systems in context, without the need to log into each SAP system separately.

Go deep with SAP insights

Get a complete business view for all your processes, so you can spot problems quicker, and speed mean time to resolution.

Agentless monitoring Save time and effort with agentless monitoring of SAP systems. There's no need to install monitoring agents in SAP production servers; instead leverage SAP existing data sources through an enterprise connector in a central monitoring server.

Best-in-class SAP observability

Monitor the performance and overall health of your entire SAP ecosystem or individual components with an SAP-friendly integration. Enjoy one view across all systems, combining telemetry from all SAP and non-SAP systems.

Fast root-cause identification

Get insights into probable root causes of issues. Quickly see why each open issue occured, which deployments contributed, relevant error logs and attributes to determine probable cause and speed resolution.
